What's new?

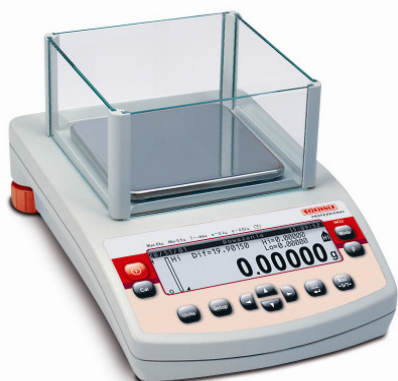

- * **New product range of laboratory scales for precise measurements**
Available September 2009!

Soehnle Professional introduces a new product range of laboratory scales and devices. We now offer precision and analytical scales. With their different functionalities and a modern design, they supplement Soehnle Professional's product range.

All scales are **approved either Class I or II**. A selection between three function levels - **Standard, Basic and Pro** - allows for finding the right product. Independent of the version, all scales offer:

- * Backlighted display
- * Functions: Piece counting, percentage weighing, checking, and underfloor weighing
- * Internal calibration
- * Serial interface RS232 as standard
- * Connection of second indicator possible

Precision scales, approved Class II

- * **New product:**
Analogue/Digital Converter 3005
Available September 2009!

The **A/D Converter Professional 3005** enables the experienced user and scale manufacturer the installation of strain gauge load cell systems, which do not require an indicator.

The measuring data is provided for electronic processing via a selection of optional interfaces such as RS232, USB, Ethernet, Bluetooth™ and more. This allows you to easily connect scales to data processing systems. Up to six load cells in one scale are possible to connect.

Two versions are available:

The Basic version (3005.01.001) has **one measuring point for strain gauge load cells and one serial interface RS232 as standard**. The Profibus version (3005.05.001) offers additionally a Profibus.

Available functions are weighing, taring, switching, and dosing. With an internal division of 16 million digits and a measuring value rate of 80 per second, it is a perfect match for various industries such as plant construction, process technology, or even in scientific applications.

The system is easily configured via a PC software program, available in German, English and French.

If you are interested, please feel free to contact [us](#).

Analytical scales, approved Class I

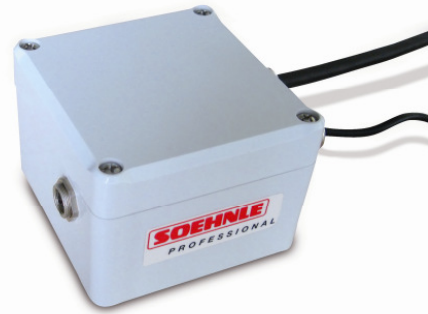

Our new range provides moisture analysers that are measuring devices especially designed for determining the moisture content of relatively small samples of different materials. The sample materials are first weighed and then dried. The difference of the initial weight and those after the drying process determine the moisture. The application area of moisture analysers: from the use in laboratories to industrial and commercial applications.

Moisture analysers

We will inform you about our whole range of laboratory scales in the next weeks including a brochure with all details.

Curios?

MEDICA 2009

Soehnle Professional will exhibit again on the world's largest medical fair - **MEDICA 2009!**

18th - 21st
November 2009

Meet us in Dusseldorf, Germany in hall 12 / stand E31 to learn about our latest products! We look forward meeting you!

Dusseldorf,
Germany

www.medica.com

Valid until 30th September 2009!

Please keep in mind our **special offer** in June/July 2009 for the **Compact scale 7755.12/15** and the **Baby Scale 8320!**

The Special offer is also available with more details [here](#).
